

EV-MASS FILTRATION & REMEDIATION SKID

HIGH FLOW FILTRATION. SMALL FOOTPRINT.

Adaptability is a vital factor in any emerging industry. Cannabis is no different, with extracts becoming an increasingly prominent and profitable opportunity. This means producers will need to continually iterate upon their manufacturing process to achieve new target objectives.

Our EV-MASS Filtration & Remediation Skid meets the growing demands of the cannabis market. Its small footprint, ease-of-use and high throughput make the FRS-22P a go-to filtration & colour remediation solutions for all extraction methods.

**BOOK A CONSULTATION WITH AN
EVOLVED EXTRACTION
SPECIALIST TODAY.**

A NATURAL SELECTION

- Small footprint
- Designed for easy cleanability
- Filter up to 30 gal / min
- GMP compliant
- Pair with existing CO2 or hydrocarbon systems for greater production output
- Rated for C1D1/C1D2 hazardous locations
- Guaranteed performance results
- 12-month warranty
- Receive leading after-sale support & supply of parts & solvents

**A FILTRATION SOLUTION FOR ANY
EXTRACTION METHOD**

EVOLVDEXTRACTION.COM

**IMPROVE QUALITY.
INCREASE OUTPUT.
REDUCE COST.**

We designed the FRS-22P-V2 to better synchronize and streamline the filtration process without compromising quality. The result? We've consolidated three filtration steps into one workflow to optimize your efficiency, reduce your costs, and increase your output.

This sequencing dramatically improves clarity, colour, and flavour profiles, while minimizing the expense of post-processing waste. Multiple configurations are available to accommodate CO2, ethanol, and hydrocarbon extraction methods.

**RAPID THROUGHPUT.
SUPERIOR RESULTS.**

**SYSTEM AGNOSTIC AUXILIARY SKIDS
FILTRATION SOLUTIONS FOR CO2, ETHANOL,
& HYDROCARBON SYSTEMS**

- Primary filtration to removes suspended lipids, waxes, and biomass
- Decolourizing the extract by removing chlorophyll and other pigments
- Secondary filtration to perform a final polish and ensure high-quality outputs
